

--	--	--	--	--	--	--	--	--

				Summary Findings: Waiting lists grew for four of the five imaging tests: MRI from 332,575 to 385,738 (+16.0%), non-obstetric ultrasound from 192,176 to 203,873 (+6.1%). Barium swallow from 3,218 to 4,295 (+32.6%). DEXA was the only test that decreased from 59,433 to 58,118 (-2.2%). Across all five tests combined, the total waiting list grew by about 11% (1,167,879 to 1,297,539). Ultrasound had the largest waiting list in both years. Limitations: This compares two single months, so seasonal variations may affect the results. It shows total waiting list size only, not how long people have been waiting. Figures are as published by NHS England and may be subject to change. Data source: NHS England, Monthly Diagnostics Waiting Lists (February 2025 and February 2026).
